SERIES 2530

ASME/ANSI SPECIFICATION
B73.1 DIMENSIONS

SERIES 2630

SELF-PRIMING

Close Coupled Sealless Pumps

BULLETIN 25B1

FYBROC SERIES 2530 CLOSE-COUPLED SEALLESS PUMPS

- Capacities to 650 GPM (150 m³/hr)
- Heads to 400 feet (125 m)
- Powers to 40 HP (30 kw)
- Temperatures to 200°F (93°C)
- Working Pressures to 200 PSI (1,380 kPa)
- Eight pump sizes
- Materials of construction availability:
VR-1, VR-1 BPO-DMA, EY-2

FEATURES

- "All-FRP", continuous strand, thermoset construction
- Sealless design
- **NO** separate liner concerns
- Separate impeller and inner magnet assembly
- Stationary, self-aligning, sintered silicon carbide shaft
- Interchangeable front and rear thrust bearings
- ASME/ANSI B73.1 dimensioned
- Zero emissions/leakage
- Simple operation and ease of maintenance

APPLICATIONS & SERVICES

- | | |
|----------------------------------|---------------------------|
| • Chemical Processes | • Battery Manufacturers |
| • Metal Finishing | • General Industrial |
| • Pharmaceutical | • Hydrochloric Acid |
| • Food Processing | • Sodium Hydroxide |
| • Scrubber OEMs | • Sodium Hypochlorite |
| • Semi-Conductor | • Sulfuric Acid |
| • Printed Circuit Boards | • Ferric/Ferrous Chloride |
| • Rail Car/Tank Unloading | • Nitric Acid |
| • Water and Wastewater Treatment | • Chromic Acid |
| • Pulp and Paper | • Solvents |
| • Automotive | • Specialty Chemicals |

**VR-1
Construction**

**EY-2
Construction**

SIMPLE, RELIABLE AND COST EFFECTIVE

CLOSE-COUPLED DESIGN

C-Face motor eliminates need to perform pump/motor alignment. Adapts to NEMA and IEC motors.

INSTRUMENTATION PORTS

Two ports provided for performance monitoring.

OUTER MAGNETS

High strength Neodymium Iron Boron magnets that provide high torque and hard start capability without slip.

CLOSE CLEARANCE OUTER RING

Protects containment shell in the event of a motor bearing failure.

SINGLE AXIALLY CLAMPED O-RING SEAL BETWEEN CASING AND COVER

Fully confined to prevent leakage/blowout.

SEPARATE INNER MAGNET RING ASSEMBLY

Replaceable (removable) from impeller thereby reducing maintenance and inventory costs. Neodymium Iron Boron magnets encapsulated for corrosion resistance.

SLEEVE BEARING

Sintered silicon carbide for optimum corrosion and wear resistance. Internal spiral groove and face grooves for lubrication and self-purging of contaminants. Porous material structure retains lubricant in the event of liquid loss. Optional carbon sleeve bearing for extended dry-running.

ONE-PIECE REINFORCED CASING WITH INTEGRAL FLANGES

No liner failure concerns. Gusseted flat face flanges meet ASME/ANSI B16.5 Class 150. Also available with ISO/JIS/DIN flanges.

ANSI DIMENSIONAL CASING

ANSI dimensional requirements permit the maximum interchangeability of pumps between pump manufacturers.

INTERCHANGEABLE FRONT AND REAR THRUST BEARINGS

Sintered silicon carbide for optimum corrosion and wear resistance. Keyed to prevent rotation.

MOTOR ADAPTER

Rigid Cast Iron. Polyester powder coating for corrosion resistance.

RETAINING RING

Reinforced fiberglass construction. Eccentric OD/ID allows for easy installation and rotation to lock into position.

CASING THRU-BOLTS

Double nutted to allow for back pull-out without breaking fluid containment.

RIGID CASING FEET

Reduces the effect of pipe loads on pump and alignment.

LARGE DIAMETER, STATIONARY, SELF-ALIGNING SHAFT DESIGN

Sintered silicon carbide for optimum corrosion and wear resistance. Fully supported by containment cover and suction web and sized to eliminate shaft deflection.

CLOSED IMPELLER DESIGN

Provides axial balancing eliminating axial thrust loads and extending thrust bearing life. Radial hydraulic forces carried between shaft supports eliminate overhung loads.

ONE PIECE COVER/CONTAINMENT SHELL

Thick walled, non-metallic construction that allows for accurate alignment. Eliminates gasketed joint and energy losses/heat build-up from magnetic coupling eddy currents.

HIGH PRESSURE BEARING LUBRICATION

Utilizes pump discharge pressure to lubricate shaft and sleeve bearing. Clean process fluid is ensured by tight cover/casing clearance filtering occasional solids.

FYBROC SERIES 2530 – DESIGN FEATURES

FIGURE 1

- Separate impeller and inner magnet ring assembly
- Replaceable (removable) from impeller thereby reducing routine maintenance and inventory costs
- Neodymium Iron Boron magnets encapsulated with 1/8" fiberglass corrosion protection
- Closed impeller design with low stress hex drive

Fig. 1

FIGURE 2

- One-piece reinforced (ASME/ANSI dimensioned) casing with integral, gusseted flanges
- **NO SEPARATE LINER FAILURE CONCERNS**
- Expanded suction eye to compensate for suction web, thereby yielding lower NPSH requirements

Fig. 2

ASSEMBLED PUMP END

CONTAINED LIQUID END WITH OUTER MAGNET ASSEMBLY AND PUMP ADAPTER REMOVED

FRP Axially Balanced, Closed Impeller

FRP Bearing Pin

drives sleeve bearing and is held in place by inner magnet ring and pin shoulder

Inner Magnet Ring with FRP Corrosion Protection

FRP Reinforced Eccentric OD/ID Retaining Ring

Sintered SiC Rear Thrust Bearing

O-ring

One-piece FRP Cover/Containment Shell

HIGH PRESSURE BEARING LUBRICATION PATH

- Bearing lubrication path taken off of high pressure area
- Filters occasional solids out of the lubrication flow path
- Solid size restricted by the nominal 1/16" casing/cover clearance
- Sleeve bearing contains an integral spiral groove and face grooves for lubrication and self-purging of contaminants

FYBROC SERIES 2630 SELF-PRIMING

- **Capacities to 300 GPM (70 m³/hr)**
- **Heads to 200 feet (65 m)**
- **Suction Lifts to 20 feet (6 m)**
- **Two pump sizes**

The Fybroc Series 2630 is an FRP, close-coupled, self-priming, magnetic-drive sealless pump that incorporates many of the features found on the Fybroc Series 2530 pumps. With the exception of the casing volute/tank assembly, all components of the Series 2630 are fully interchangeable with those of the Series 2530. The Series 2630 is ideally suited for corrosive sump applications, tank car unloading, and other similar, demanding applications. The volute casing has been designed with optimal proportions in the recirculation chamber to provide for short and efficient priming times, without the use of troublesome check valves. The volute casing inlet

has also been designed to minimize NPSH requirements, thereby leading to greater allowable suction lifts.

An important feature of the Series 2630 is its replaceable volute extension. The casing volute cutwater in any self-priming pump must be in close proximity to the impeller in order to permit efficient priming. The removable volute extension in the Series 2630 is available in a number of sizes to match specific impeller diameters permitting field hydraulic changes and the restoration of priming efficiency, all without casing modifications or replacement.
